

BRS ARE SPECIALISTS IN | **BUILDING RECTIFICATION**  
**WINDOW REPLACEMENT** | **SERVICES**

**Whilst Queensland is one of the most beautiful places to live, it also has some of the harshest conditions for building maintenance and corrosion. The combination of strong wind, rain and salt air leads to rapid deterioration of all external surfaces and finishes to buildings in particular windows and doors.**

We work closely with major supplies such as G.James Glass and Aluminium a manufacturer based in Queensland. G.James commercial products achieve a higher water penetration and wind ratings which is critical in the harsh Queensland environment. All products are installed by our highly trained & experienced installers ensuring the highest quality finish that also fully complies with all current Australian Standards.

This type of work is quite often carried out in conjunction with other refurbishment works such as concrete repairs, facade repainting, handrail replacement etc. We are able to provide you with many references of completed projects.
